

SITUATION

- **DUJUAN** intensified into a **Typhoon** late on 24 September, while remaining over open waters. On **25 September**, the Typhoon's centre was located approximately 925 km south-east of the southernmost Japanese groups of islands, **Yaeyama** and **Miyako**. It had maximum sustained wind speed of 139 km/h and was moving with a **north-west** direction.
- DUJUAN is forecast to start approaching **Miyako** and **Yaeyama** islands on 27 September, having intensified into a **very strong Typhoon**. It will enter the **East China Sea** on 28 September, having slightly weakened, but remaining a strong Typhoon.
- According to the forecast based on the data of 25 September 6.00 UTC, the Typhoon's centre will subsequently pass north of **Taiwan** and head straight towards **Fujian** province. It may approach and make landfall in the northern coast of Fujian as a **Typhoon**, on **29 September** (UTC). However, **track uncertainty** remains **high**, as of 25 September.
- DUJUAN, named "**JENNY**" in the Philippines, continues producing **moderate to heavy rain** within a 600 km diameter from its centre, according to PAGASA. Strong winds are expected to start affecting the sea east of Taiwan within the next 24 h, according to the Chinese Meteorological Administration. **No Warnings** have been issued for land by the concerned countries, as of 25 September in the afternoon (UTC). However, **Advisories for high waves** are in effect for the islands of Okinawa prefecture, including Yaeyama and Miyako groups.
- As the event progresses and the forecast changes, **GDACS** has lowered a previous Red Alert for **wind impact to Orange**. DUJUAN may approach Yaeyama and Miyako islands reaching maximum sustained wind speed of at least **222 km/h** (27 September, 6.00 UTC) and northern Fujian with **176 km/h** (29 September, 6.00 UTC), according to the latest forecast.

TROPICAL CYCLONE POSITION	TROPICAL CYCLONE INTENSITY	WIND BUFFERS	GDACS ALERTS	POPULATION DENSITY ppl/sq.m
Observed position	Tropical Depression	64 km/h	Moderate event	> 5 000
Forecast position	Tropical Storm	92 km/h	Potential local disaster	2 500 - 5 000
