

SITUATION

- TC NIDA first made landfall over north-eastern Cagayan province (Philippines) on 31 July as a Typhoon. It later made a second landfall over Dapeng Peninsula (Shenzhen city, Guangdong province, China) on 1 August at 19:35 UTC as a Typhoon. On 2 August at 0.00 UTC its centre was located over Guangdong province approx. 45 km south-east of Foshan city and it had max. sustained wind speed of 120 km/h (Typhoon).
- Over the next 24 h it is forecast to continue moving north-west over land, weakening and dissipating over the province of Guangxi. Heavy rain and strong winds may affect the provinces of Guangdong, Guangxi, southern Hunan, south-eastern Fujian and Guizhou.
- Heavy rain and strong winds affected Hong Kong (China) and northern Philippines, causing damage. Local authorities in Hong Kong (China), as of 2 August, reported three people injured, 218 evacuated, several flights cancelled and schools closed throughout the city. The Philippine national authorities also reported, as of 1 August, over 1 000 people evacuated and over 8 300 affected in the regions of Ilocos Norte and Cagayan Valley.
